

# RIGIS User Group Meeting

June 24, 2014

*The Road Not Taken - Route Finding Help for Emergency  
Responders and Evacuees*

Michele Giorgianni, GISP  
Asst. Director Of Local Govt. Services

# Case Studies

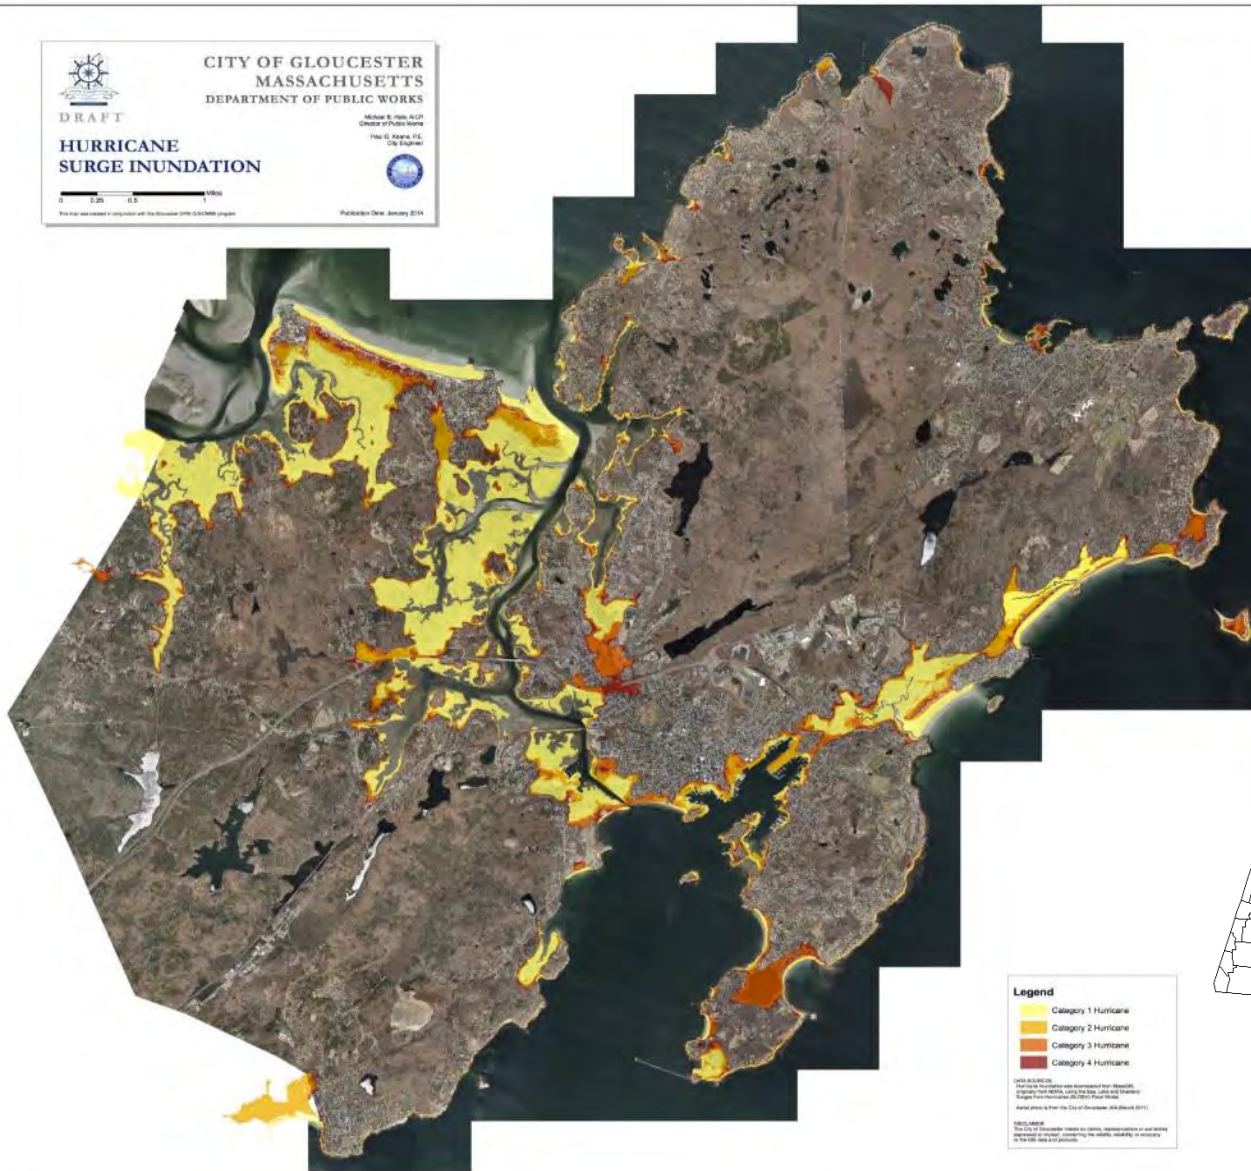

- Gloucester, MA
  - Hurricane Evacuation Zones Re-evaluation
- Texas DOT
  - Road Conditions website development

# Re-evaluating Hurricane Evacuation Zones

City of Gloucester  
Massachusetts

Presented at  
Spring NEARC 2014  
By Peter Lemack

# MEMA's Hurricane Evacuation Zone Assessment

- MEMA utilized NOAA Slosh Model
- Evacuation Zones based on Census Blocks
- Evacuation Zones A and B
- Course – concerned City officials

# Re-evaluation of MEMA's Assessment

## Our Goals / Objectives

- Determine / Refine Hurricane Evacuation Zones
- How can our analysis benefit Emergency Managers and City Officials?

# Project Approach

- Focused on **Parcels** instead of Census Blocks
- Intersected Parcels with Hurricane Surge Inundation Areas
- Identified Evacuation / Access **Compromised Zones**
- Collected **Local Knowledge** to refine final parcel placement into Evacuation Zones

# Parcels and Inundation Zones

“A Boolean Approach”

# Evacuation / Access Compromised Zones

## “Managing Shelter in Place Islands”

### Access Compromised

EVC

### DATA SOURCES

Hurricane evacuation areas are based on parcel boundary intersections with Hurricane Inundation data.

Parcels to be reviewed were determined by AppGeo analysis and review and are meant to be reviewed with Gloucester Emergency Services personnel.

Aerial photo is from the City of Gloucester, MA (March 2011).

### DISCLAIMER

The City of Gloucester makes no claims, representations or warranties expressed or implied, concerning the validity, reliability, or accuracy of the GIS data and products.

HURRICANE EVACUATION  
ZONES REVIEW MAP

Michael R. 1986, ACP  
Director of Public Works

Paul G. Keating, P.E.  
City Engineer

0 0.25 0.5 Miles  
This map was created in conjunction with the Gloucester DPW GISCOMS project.

Publication Date: January 2014

Legend

Yellow Parcels to be Reviewed

Evacuation

Green Evacuation Zone A (Cat 1 and 2)

Purple Evacuation Zone B (Cat 3 and 4)

DATA SOURCES

Current evacuation zones are based on current boundary

variations with the current evacuation zones.

Parcels to be reviewed were determined by digital analysis

and were not intended to be reviewed with 100% accuracy.

Although the map is intended for general review of evacuation

zones, it is not intended for use as a legal document.

Revised from the City of Gloucester, MA (2011)

DISCLAIMER

The City of Gloucester makes no claims, representation or warranty

regarding the map, including the validity, reliability, or accuracy

of the data and products.

# AppGeo Results

# MEMA Results

# Benefits to Emergency Managers

- Local Input
- Resident Information
- Emergency Resources Focus

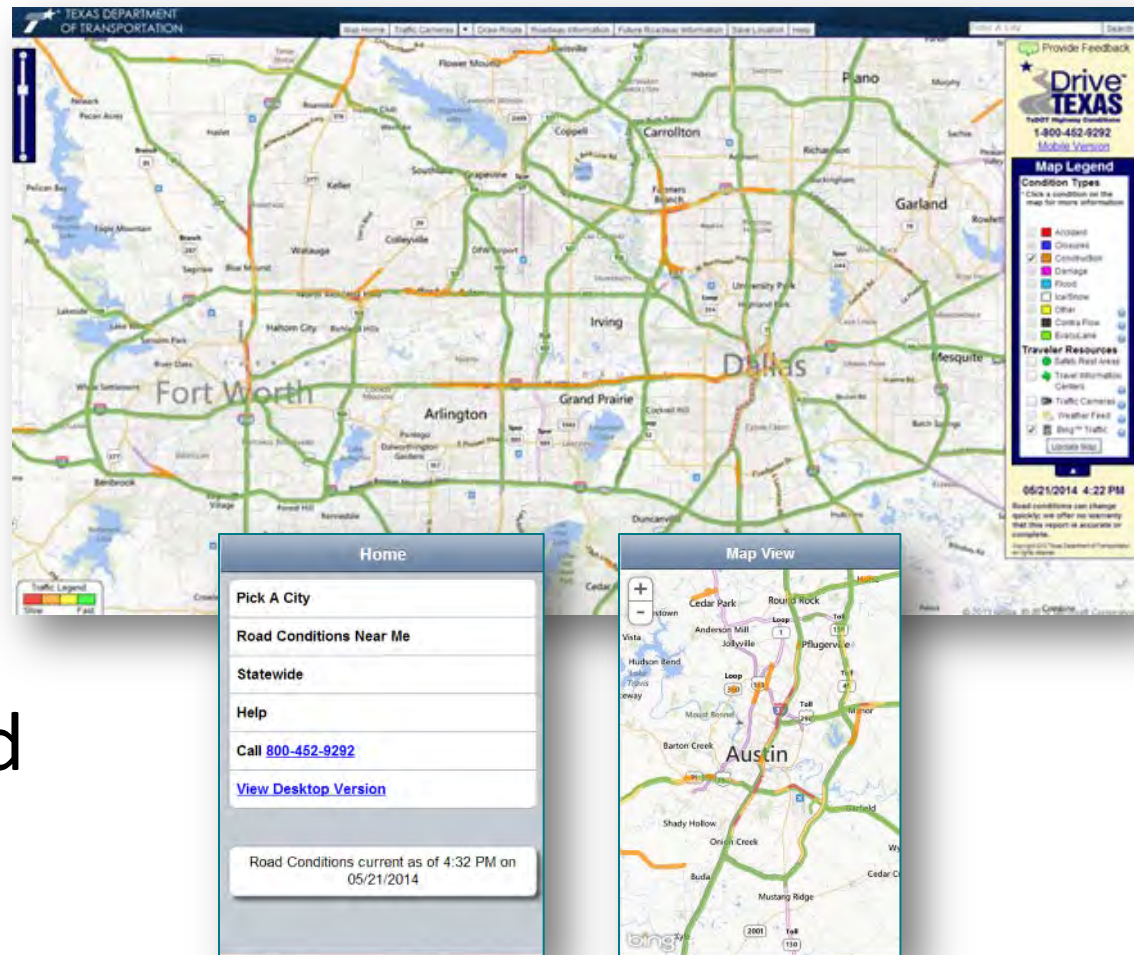

# Texas DOT – Highway Conditions

- Travel information to the public

- Construction
- Road Closures
- Flooded roads
- Events, Etc...

- Existing ArcGIS Server Website and Mobile

# Driving Demand: Scalability

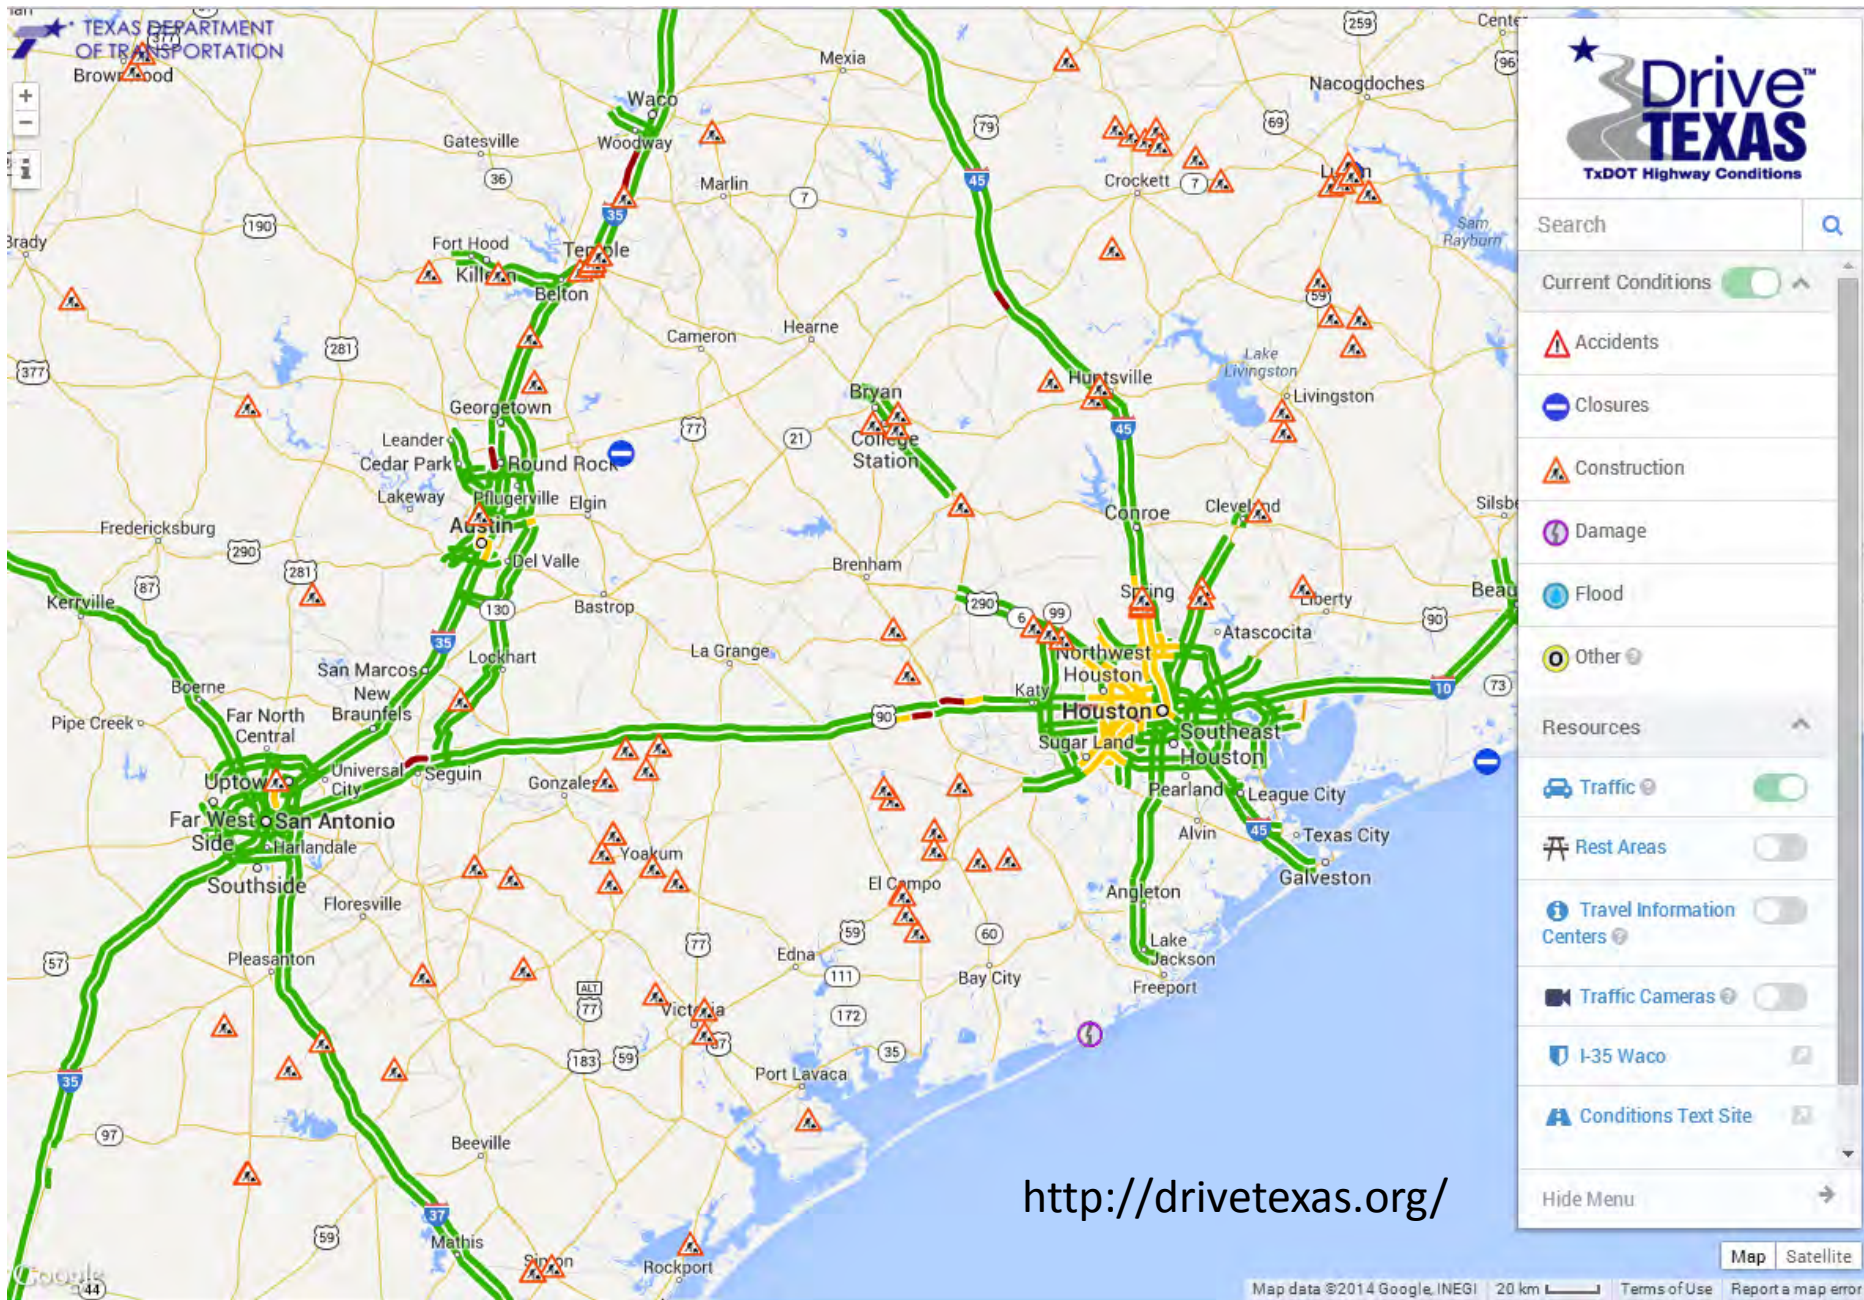

- Winter Storm in NW
  - Demand on website
  - ~1,000 simultaneous users
- Nightmare scenario: Hurricane in the Gulf of Mexico
- “Contraflow”
  - Evacuation with both sides of highway one-way

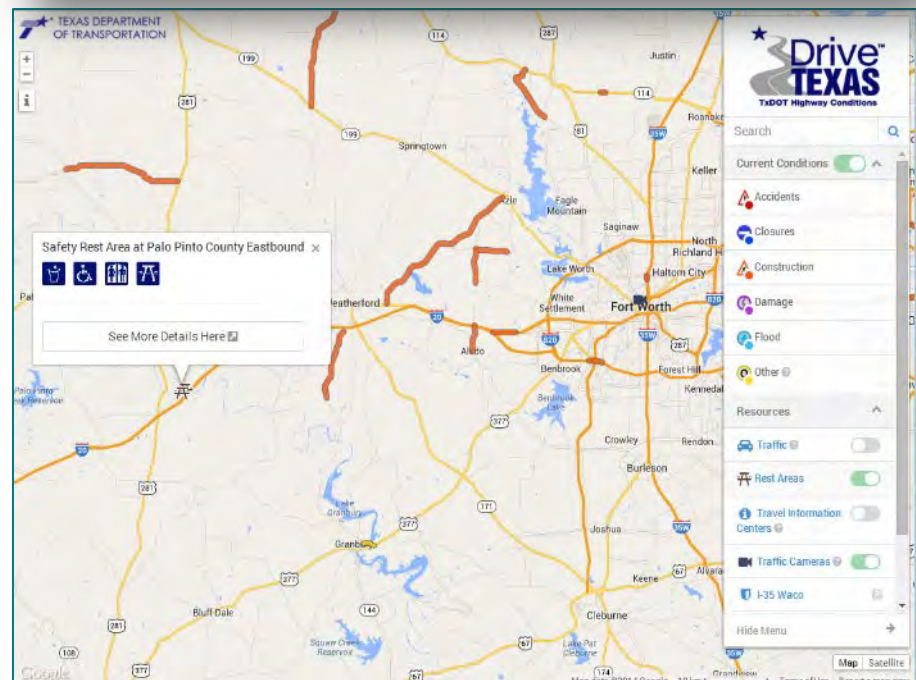

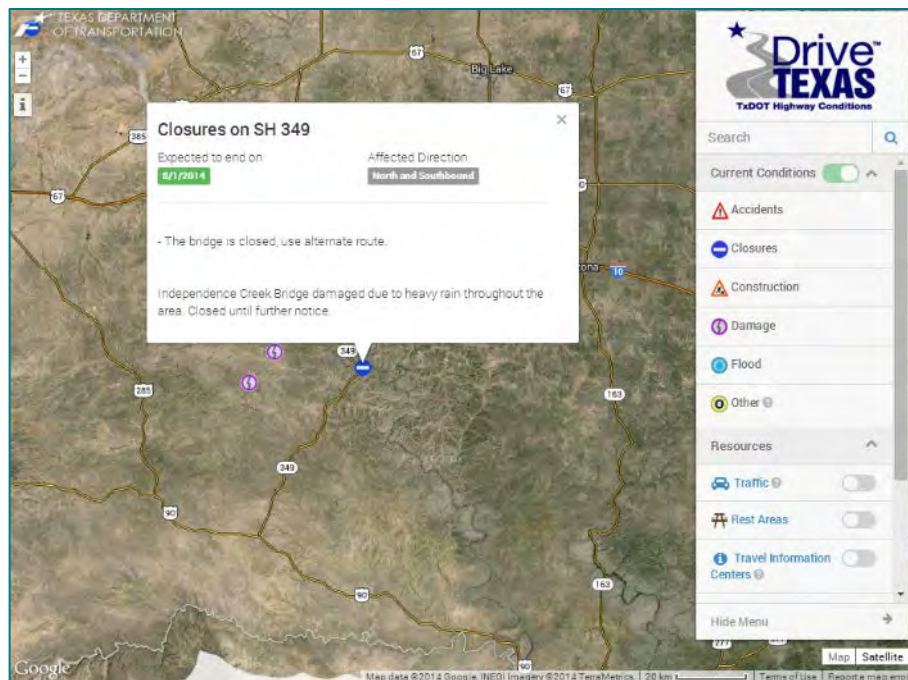

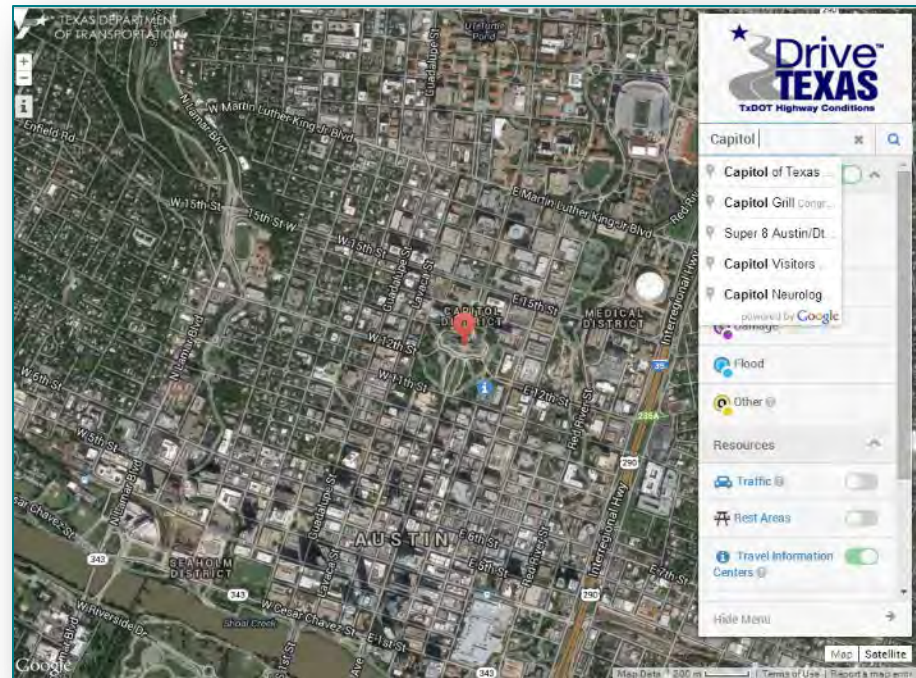

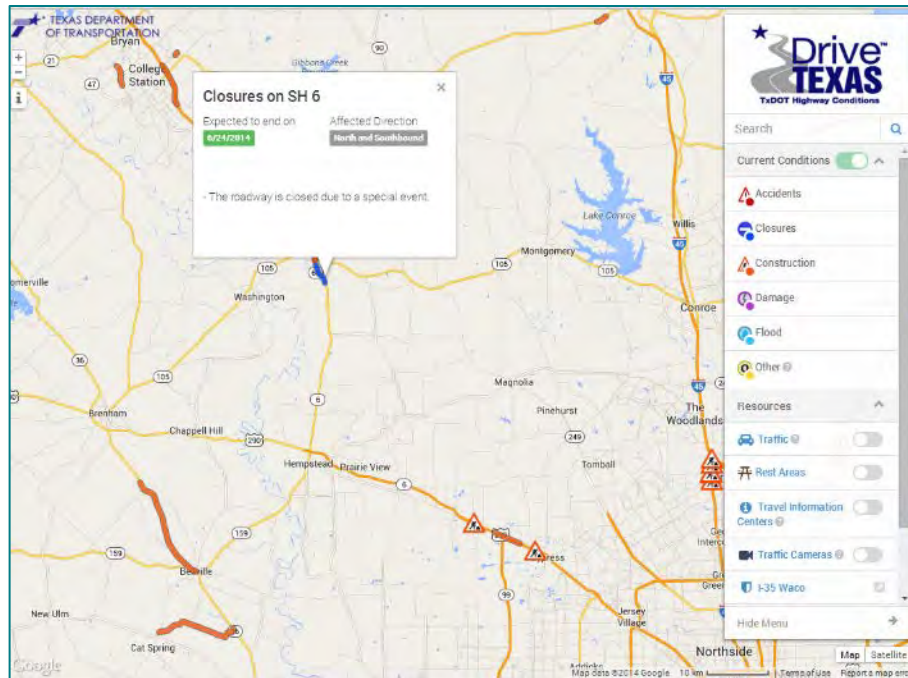

# Enter AppGeo & Google

- New Requirements
  - Similar site with
  - Modern UI
  - Robust platform
  - 10,000+ simultaneous users
- Rebuilt site with Google Maps Engine (GME)
  - Massive infrastructure and auto-scaling in the cloud
  - Load tests passed 100,000 users
- TxDOT internally updates data in ArcGIS
  - Updated to GME every 10 mins

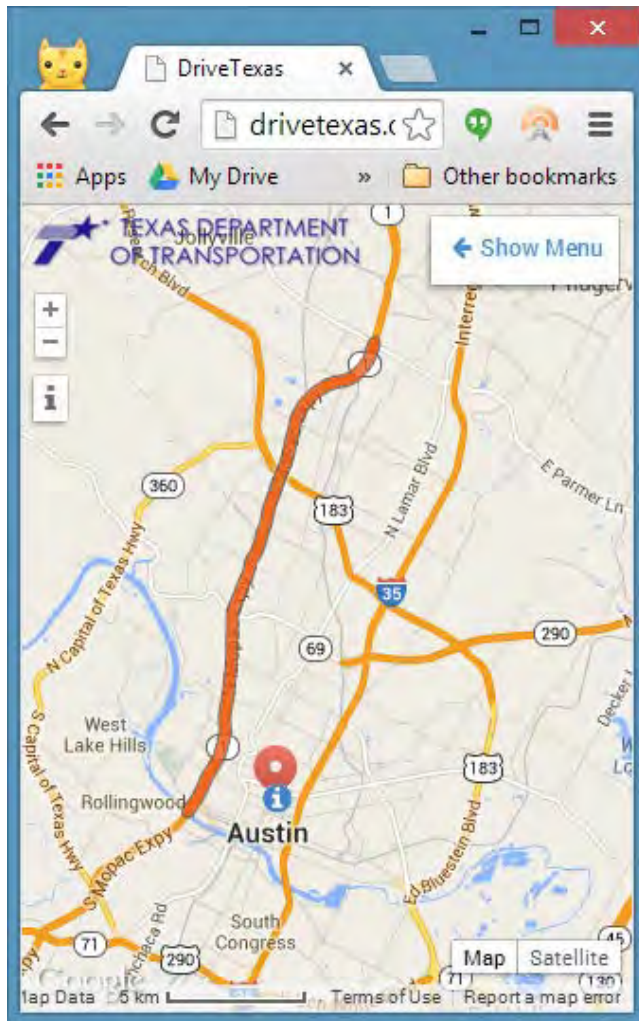

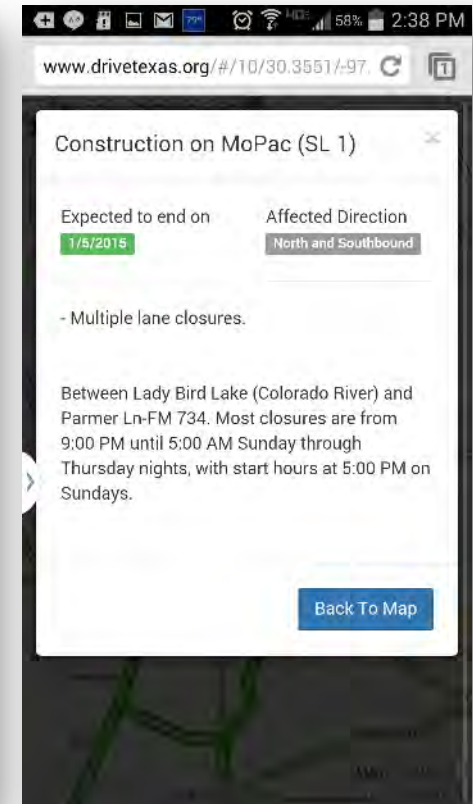

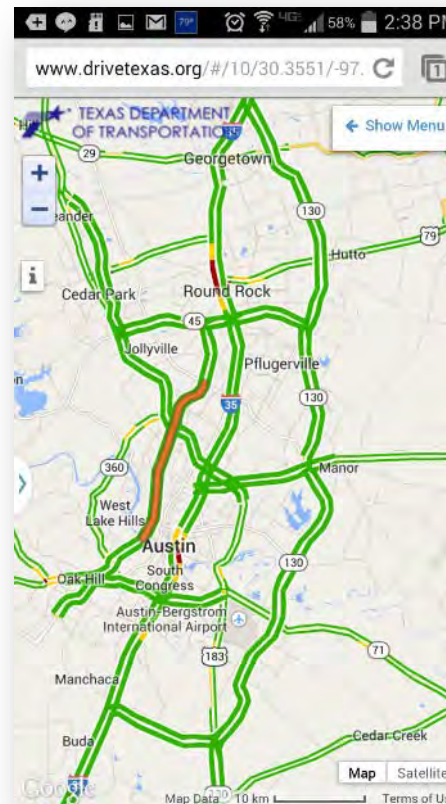

# Mobile

Browser – Dynamically Resizes

# Questions?

Michele Giorgianni, GISP

[mgiorgianni@appgeo.com](mailto:mgiorgianni@appgeo.com)

860-643-4401 x304

# NOAA Sea, Lake and Overland Surges from Hurricane Model

- MEMA and AppGeo utilized model results
- Hurricane Surge Inundation
- Created by the National Weather Service
- Estimates storm surge heights
- Models wind speeds and direction, which drive storm surges
- Incorporates
  - Physical features
  - Water depths
  - Coastal configurations
  - Roads and other anthropogenic features

# Refining our Approach

- A broader approach with additional criteria
  - Contours / DEMs
  - Proximity Analysis
  - Home location
  - Software
